

RESTRICTED

CHAPTER-22

BITUMINOUS FLEXIBLE PAVEMENT CONSTRUCTION- METHOD

SECTION 93-GENERAL

2201. Care must be taken in bituminous work to heat the binder to the correct temperature range; overheating may cause burning or oxidization of the bitumen. Temperature control in heating and during application is not so critical. With cut back as with straight-run bitumen's.

2202. Bituminous material must be laid in consolidated before it goes off (sets). This calls for skill and good organization.

2203. Recommended specifications for the various type of construction are given in succeeding sections
